POWER–INTEREST MATRIX

Project: AI-Driven Campus Navigator — My Campus Go | DTIE Idea Expo

Purpose: Identify stakeholders by their likely influence over the project (power) and how much they care about its success (interest).

HIGH POWER • HIGH INTEREST
MANAGE CLOSELY

- Project team (four students)
- DTIE project supervisor / faculty evaluator
- Campus administration or the office responsible for campus data
- Facilities / classroom-allocation coordinator

Engagement: Review requirements, confirm data accuracy, and gather feedback at key milestones.

HIGH POWER • LOWER INTEREST
KEEP SATISFIED

- University management / approving authority
- Campus IT, data-protection or security team (if approval is required)

Engagement: Provide concise progress updates and seek approvals for access, data use, and deployment.

LOWER POWER • HIGH INTEREST
KEEP INFORMED

- Current students and freshers
- Faculty members who may be searched for
- Campus visitors

Engagement: Use interviews and prototype tests; communicate changes and collect feedback.

LOWER POWER • LOWER INTEREST
MONITOR

- Students or campus users who rarely need navigation
- General campus community members not involved in the pilot

Engagement: Provide basic information and reassess their interest if the project scope expands.
